

TABLE OF CONTENTS

List of Problems	iv
List of Symbols	v
1 INTRODUCTION	1-1
1.1 Scope	1-1
1.2 Conversion of Equations from SI to PU form	1-2
1.3 Linearization of Equations	1-4
2 SYNCHRONOUS MACHINE EQUATIONS	2-1
2.1 Voltage Equations in Phase (a-b-c) Quantities	2-2
2.2 Transformation to D-Q-O Quantities	2-4
2.3 Inclusion of Damper Windings	2-9
2.4 Steady State Representation	2-10
2.5 Transient Representation	2-14
2.6 Determination of Initial Conditions	2-17
References	2-18
Problems	2-19
3 SYNCHRONOUS MACHINE EQUIVALENT CIRCUITS	3-1
3.1 Hypothetical Equivalent Circuit from D-Q-O Equations	3-2
3.2 Steady State Equivalent Circuits	3-3
3.3 Transient Equivalent Circuits	3-5
3.4 Subtransient Equivalent Circuits	3-6
3.5 Pseudo-Dynamic Analysis	3-7
3.6 Development of Electric Circuits from Magnetic Circuits	3-8
References	3-11
Problems	3-11
4 BASIC POWER SYSTEM MODELING	4-1
4.1 System Model Structure	4-1
4.2 Additional Generator Equations	4-3
4.3 The Shaft Torque Balance	4-5
4.4 Acceleration Torque	4-6
4.5 Damping Torque	4-8
4.6 Electrical (Output) Torque	4-8
4.7 Mechanical (Input) Torque	4-14
4.8 The Shaft Equation	4-14
4.9 Network Equations	4-16
4.10 Load Models	4-18
4.11 Combining Equations	4-19
References	4-24
Problems	4-25

5	DYNAMIC SYSTEM ANALYSIS	5-1
5.1	Second Order Systems	5-1
5.2	State Space Representation	5-4
5.3	General Form of the State Space Formulation	5-6
5.4	Canonical Form of the A Matrix	5-7
5.5	Modal Analysis of Response	5-8
5.6	Eigenvalue Sensitivities	5-11
	References	5-12
	Problems	5-13
6	SYSTEM MATRIX TECHNIQUES	6-1
6.1	State Space Formulation	6-2
6.2	Ordering of Vectors	6-2
6.3	Selective Partitioning	6-4
6.4	State Matrix Derivatives	6-8
6.5	Eigenvalue Sensitivity Computation	6-10
	References	6-11
	Problems	6-12
7	EXCITATION AND STABILIZER SYSTEMS	7-1
7.1	DC Generator Exciter	7-2
7.2	Static Exciter	7-4
7.3	Rotating Rectifier Exciter	7-4
7.4	Stabilizing Signals	7-5
7.5	Static Exciter with Speed Stabilizing	7-5
7.6	State Space Formulation of Equations	7-6
	References	7-10
	Problems	7-11
8	GOVERNOR, TURBINE AND SHAFT SYSTEMS	8-1
8.1	Hydraulic Governor-Turbine Units	8-2
8.2	Thermal Governor-Turbine Units	8-4
8.3	Shaft System Dynamics	8-5
	References	8-10
	Problems	8-11

9	MODEL REDUCTION	9-1
9.1	The Order Reduction Problem	9-1
9.2	State Aggregation Method	9-2
9.3	Singular Perturbation Method	9-2
9.4	Application to Engineering Systems	9-3
9.5	Physical Interpretation of State Variable Constraints	9-5
	References	9-6
	Problems	9-7
10	TORQUE COMPONENT ANALYSIS	10-1
10.1	The Model of deMello and Concordia	10-1
10.2	Torque Components in the Fixed Flux Model	10-2
10.3	Torque Components in the deMello and Concordia Model	10-3
10.4	Computation of Damping and Synchronizing Torque Coefficients	10-7
	References	10-11
	Problems	10-12
11	INDUCTION MOTOR MODELING	11-1
11.1	A 3rd Order Induction Motor Model	11-1
11.2	A Radially Connected Group of Induction Motors	11-5
11.3	An Aggregate Load Model	11-8
11.4	Validation by Transient Simulation	11-12
	References	11-15
	Problems	11-16
12	MULTI-MACHINE SYSTEMS (to be developed)
